

2019 Street Improvement Project

The Town Board has entered into a Contract with MN Paving & Materials to complete the 2019 Street Improvement Project which includes the roadways highlighted on the project location map. This project is a reclaim project which will include grinding up the existing street and creating a new road base, re-shaping the grade of the roadway, paving new asphalt, patching driveway aprons depending on the material type, and restoring along the new street edge with topsoil and seed as necessary. In addition to the street improvements, certain trees that have been marked with ribbon will be removed due to their encroachment into the street edge, and Xcel Energy intends to replace an older section of gas main along 6th Street. It is anticipated that the Contractor will begin work as early as the end of May, 2019.
